Butterflies

Butterflies are some of the most interesting insects in the world. There are over seventeen thousand different species worldwide.

Fascinating Facts

A butterfly's life cycle is made up of four parts.

1. The female butterfly lays her egg on a leaf.
 2. The egg hatches and a caterpillar comes out. It lives and eats on the leaf where it was born and will shed its skin many times.
 3. When the caterpillar has grown much bigger, it creates a chrysalis.
 4. Inside the chrysalis the caterpillar turns into a butterfly, the chrysalis breaks open and a butterfly comes out.
- Butterflies can live for between 2 days and 11 months.

Where Do They Live?

Butterflies live in lots of different places depending on what season it is. They like to live in warm places and can be found in many countries around the world. Butterflies tend to live where they can find food. They are awake during the day looking for food and at night they may be found on the underside of a leaf or tucked away in a crevice in a rock.

What Do They Eat?

Butterflies get all of the food they need by drinking. They have a long, thin tube in their mouth called a proboscis, which they use like a straw to suck up their food. Adult butterflies eat all sorts of things, such as juices from oranges and watermelons. They also eat nectar from different types of flowers and water.

Staying Safe

Some types of butterflies have eye spots on their wings. If a predator comes near they flutter their wings, showing their eye spots, which scares the predator away. Some butterflies taste horrible and bright colours usually warn other animals of this.

Questions about...

Butterflies

Answer the questions below in full sentences.

1. Where do butterflies live?

2. When are butterflies awake?

3. What do they like to eat?

4. How do they eat their food?

5. How do butterflies stay safe?

6. What does a caterpillar do before it turns into a butterfly?

7. How long can butterflies live for?
