

Odd or Even?

If a number can be shared equally, with none left over it is **EVEN**.

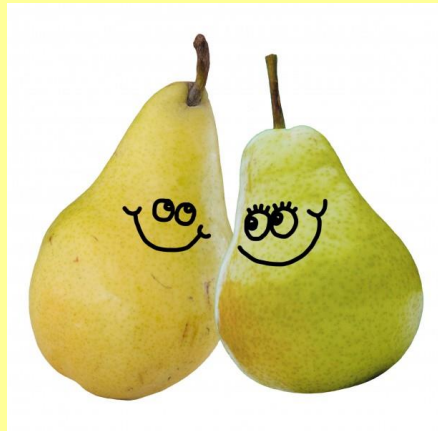

If a number can't be shared equally, and there are some left over, it is
ODD.

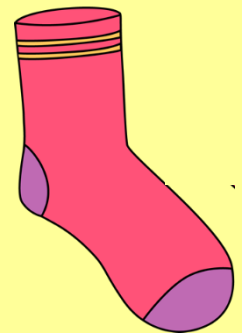

Another way to find out if a number is **odd** or **even** is to count your objects out into pairs.

How many are in a pair?

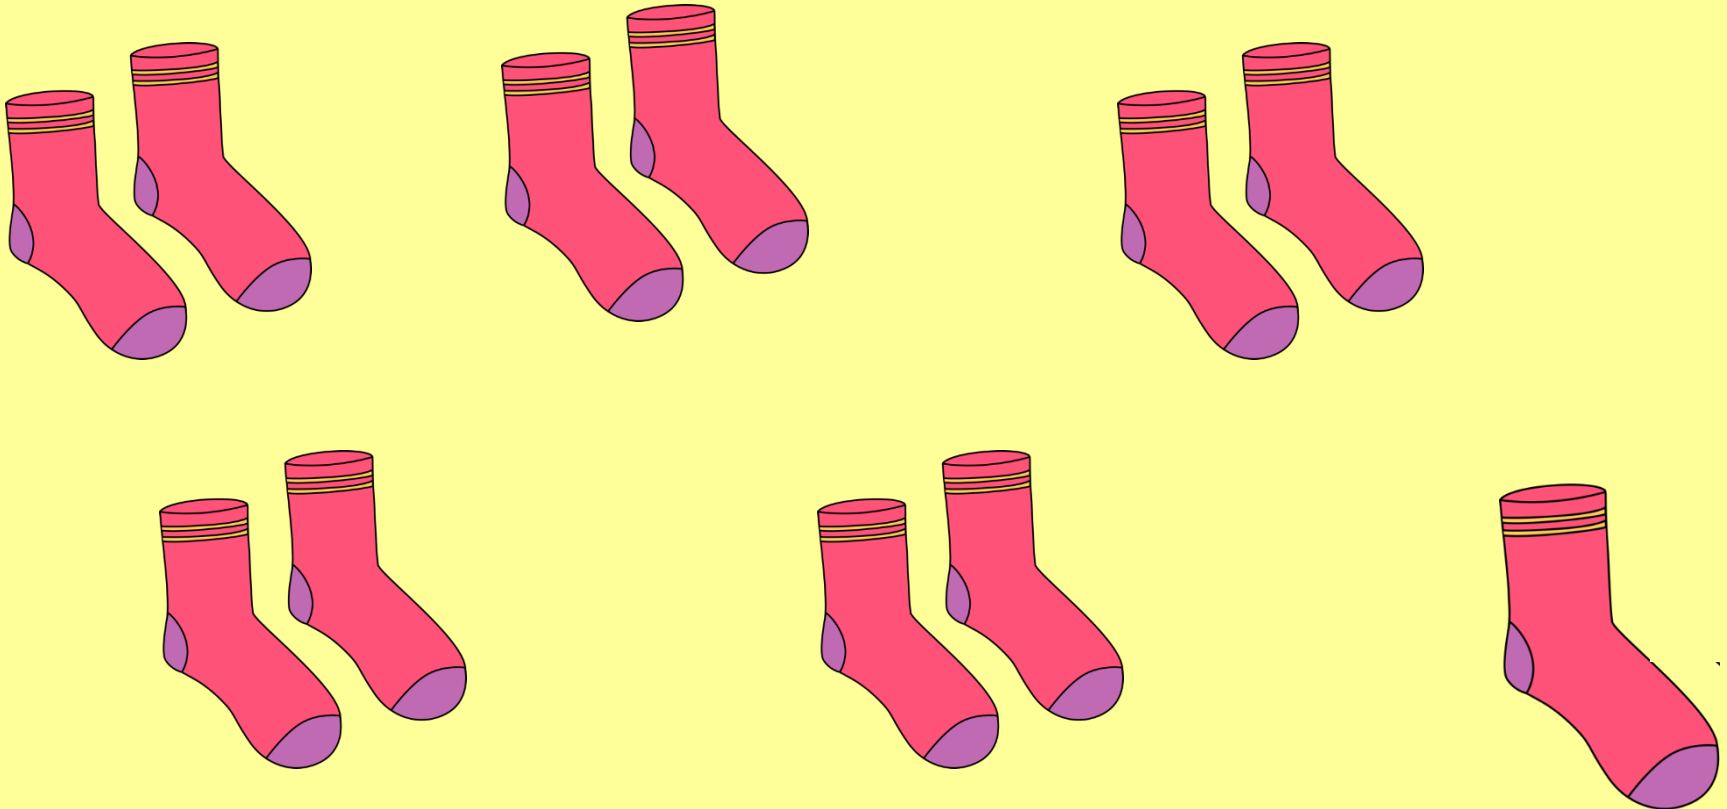

That's right there are 2 in
a pair. If we share an
amount into pairs and 1 is
left over, we know it is

odd.

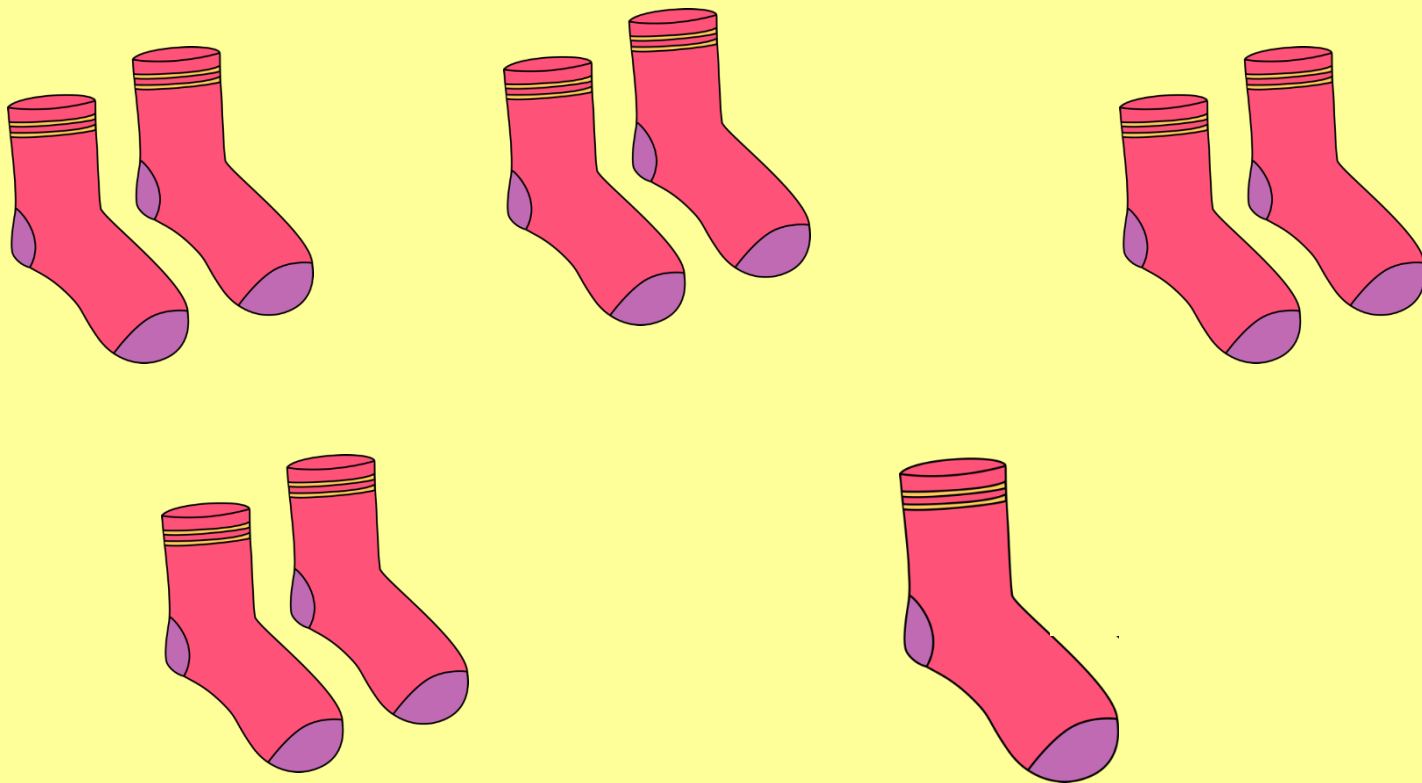

Let's give it a go...

How many socks are there? Is that
odd or **even**? How did you know?

How many socks are there? Is that
odd or **even**? How did you know?

How many socks are there? Is that
odd or **even**? How did you know?
