

Sophie's Sunflowers

Measuring Height

twinkl

Welcome to my garden!
My name is Sophie.

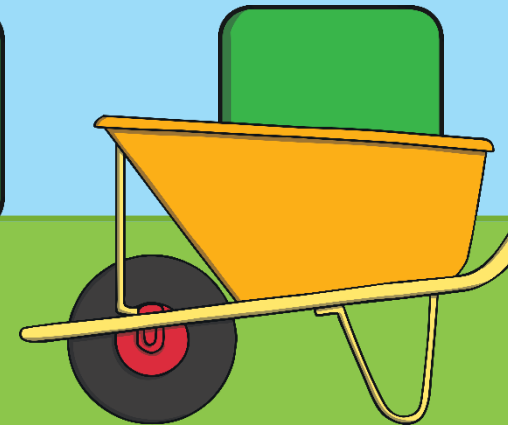

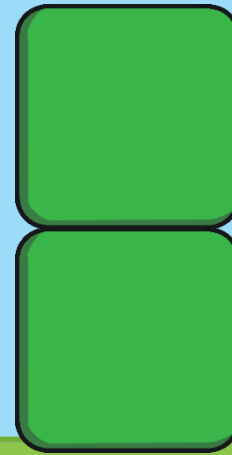

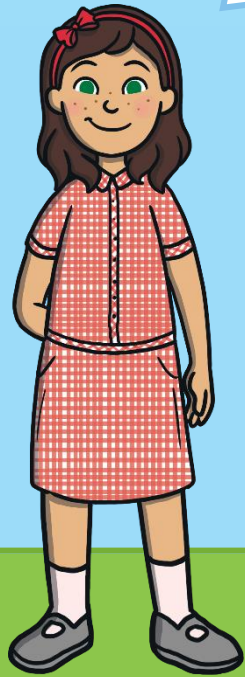

My favourite flowers are sunflowers and
there are lots of them in my garden.

I am going to use my big bricks to
measure each sunflower. Would you
help me to measure my sunflowers?

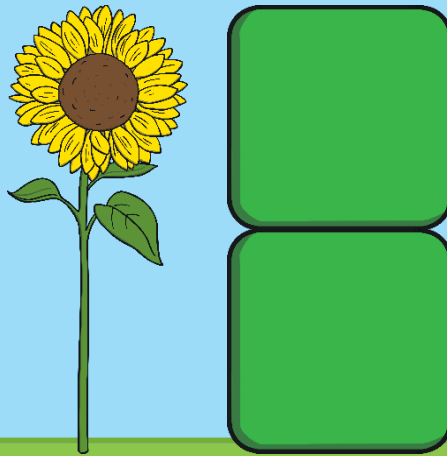

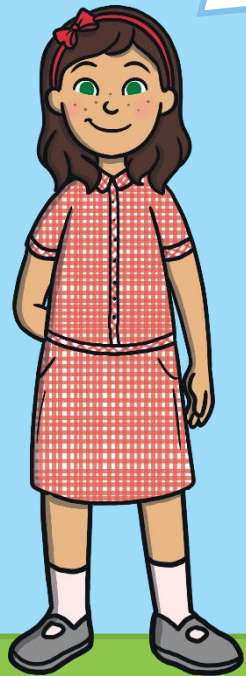

I wonder which sunflower
is the tallest.

Let's measure this sunflower. Can you count how many bricks tall the sunflower is?

This sunflower is as tall as 2 bricks. Can you tell a friend how to measure a sunflower using bricks?

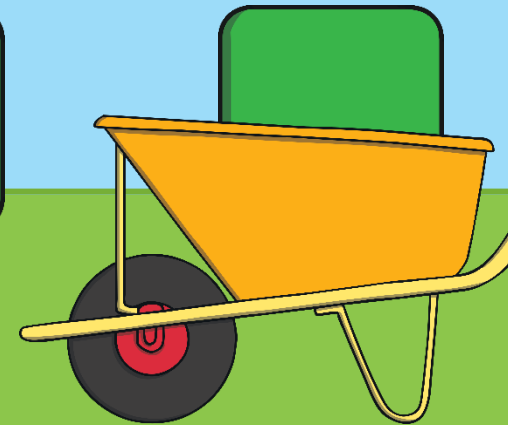

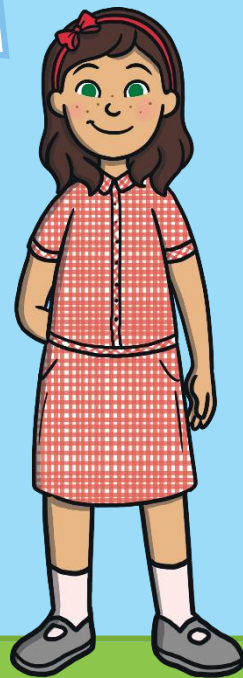

Top Tip: When you measure a sunflower, make sure you place the bricks right at the bottom of the sunflower and measure all the way to the top.

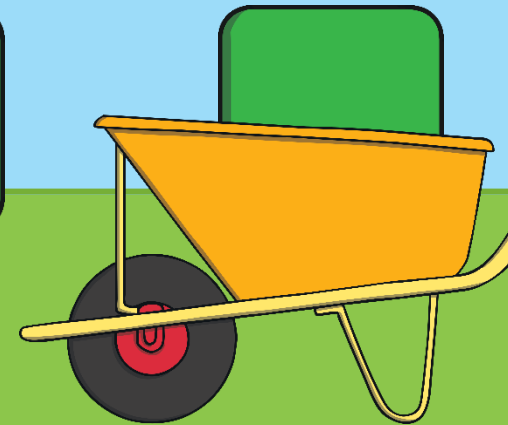

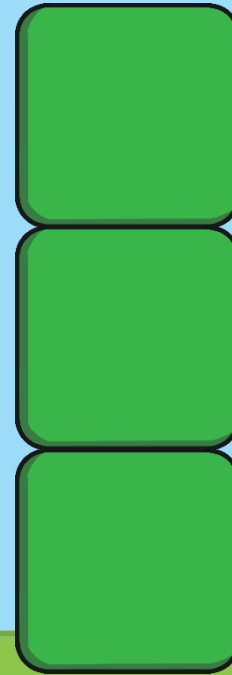

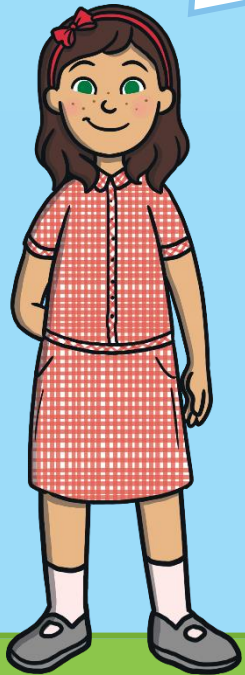

Make sure the tower of bricks is the same height as the sunflower.

How many bricks tall is this sunflower?

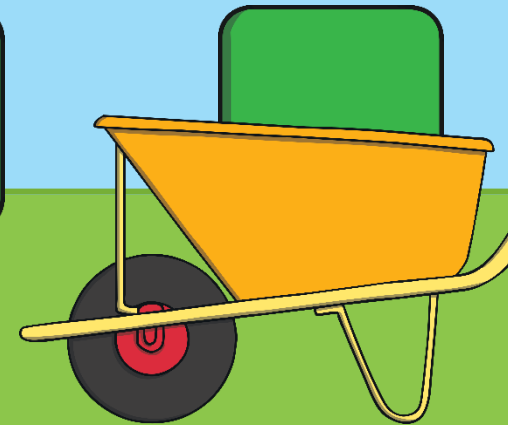

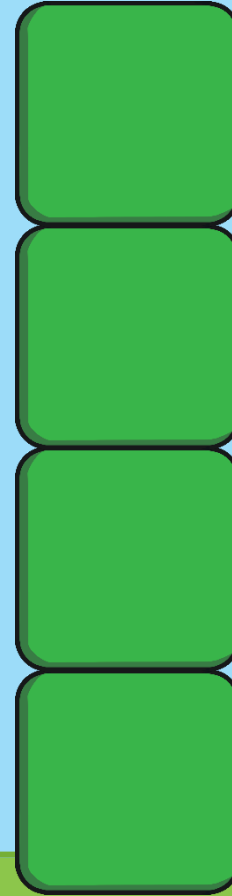

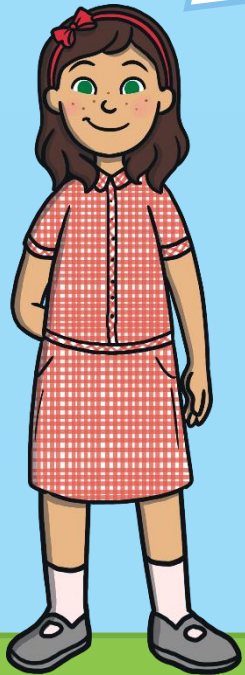

What do you notice about the height of the sunflower and my height?

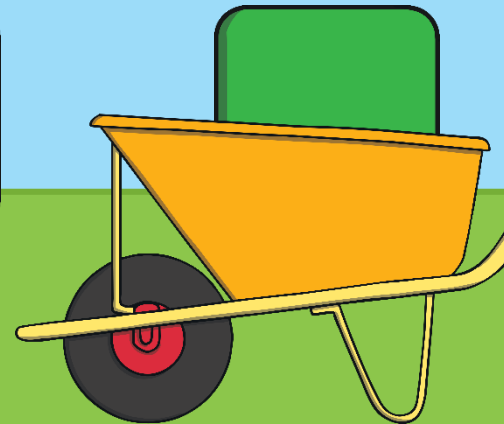

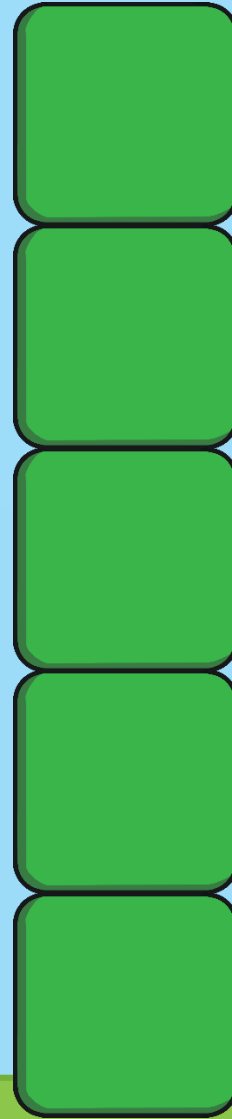

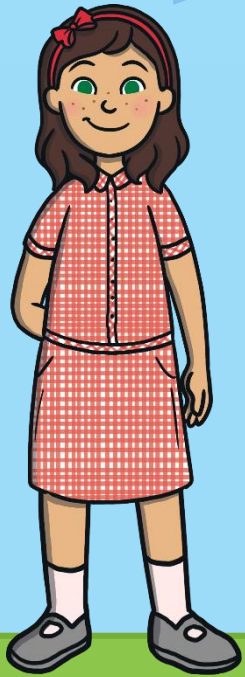

Did I measure
this sunflower
correctly? Why?
Why not?

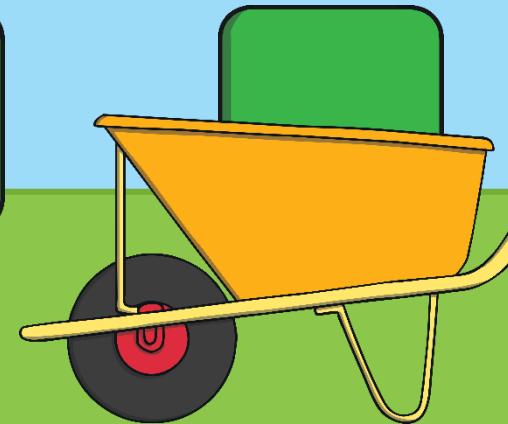

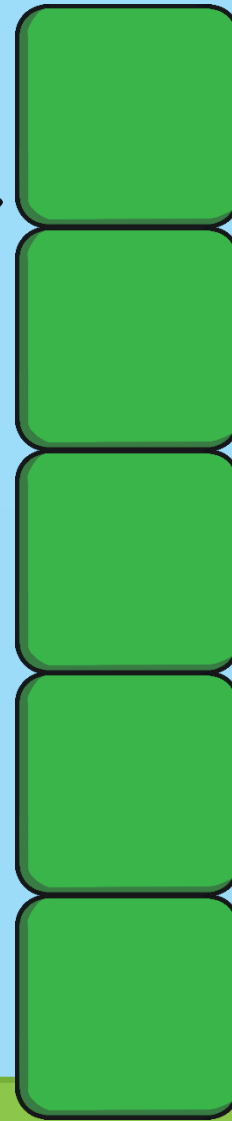

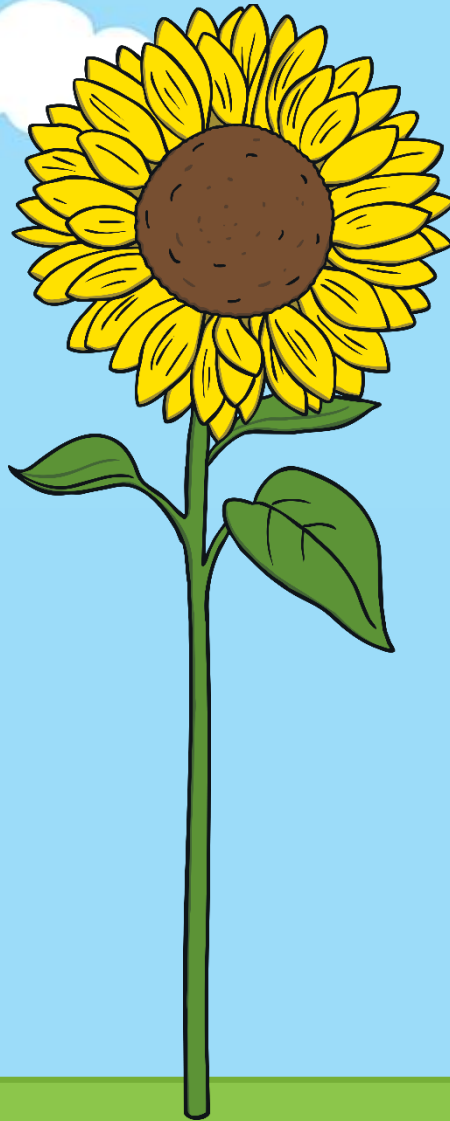

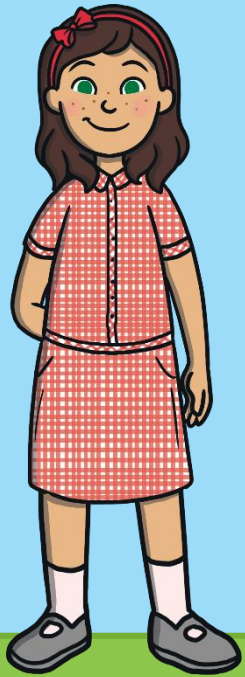

I think this sunflower is 4 bricks tall. Am I correct? How can we check?

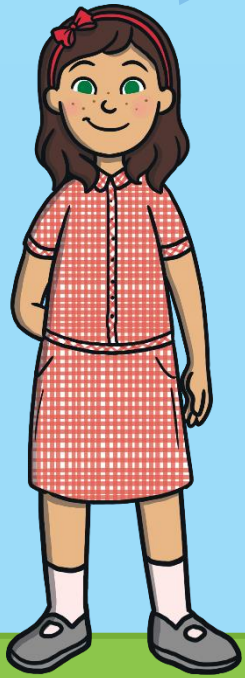

Have I measured this sunflower correctly?
Tell a friend what you think I need to do.

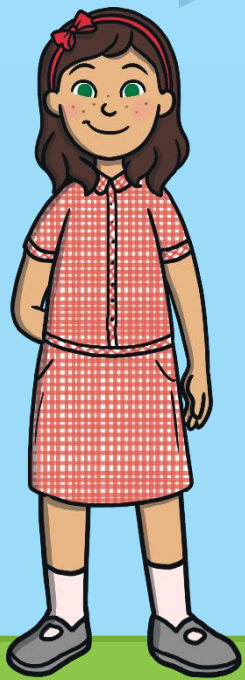

We have found the tallest sunflower!
How many bricks do I need to make a tower of the same height?

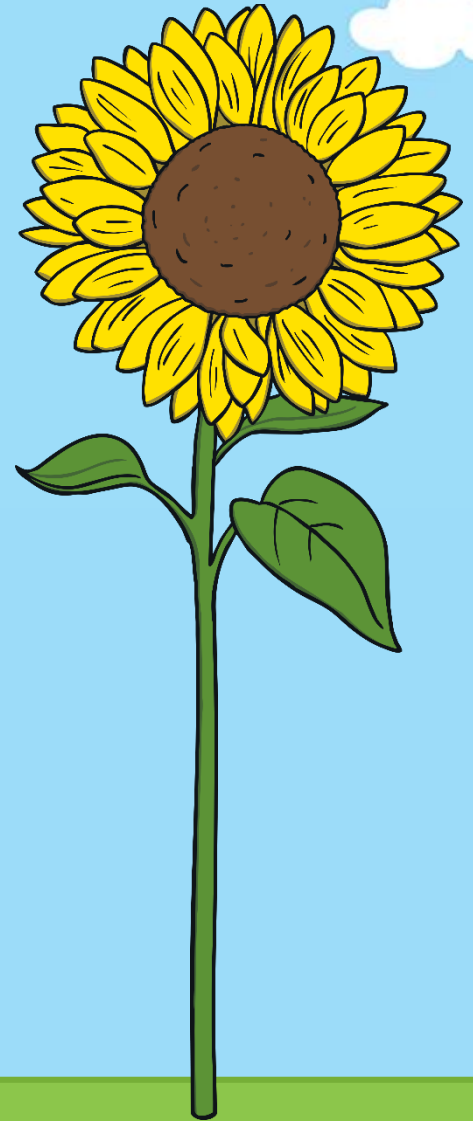

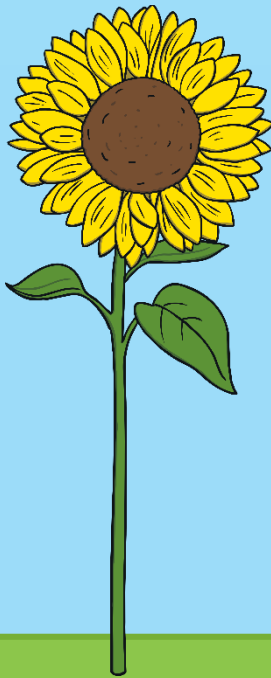

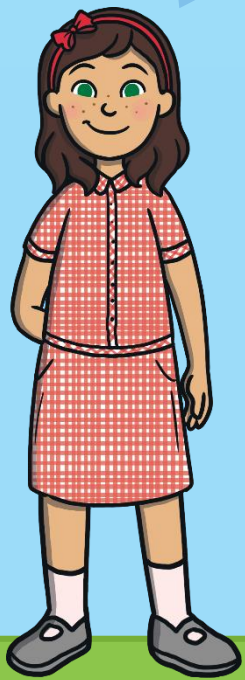

Here are all my lovely sunflowers.

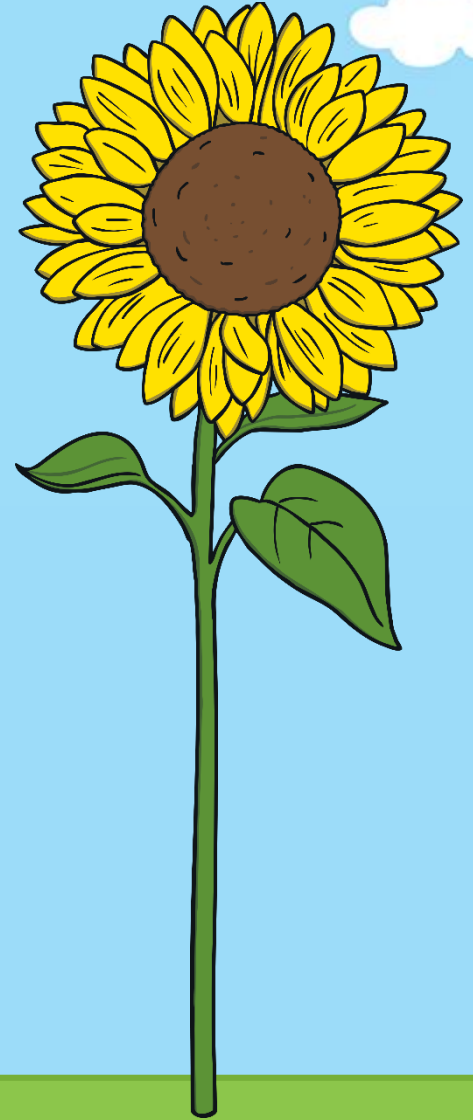

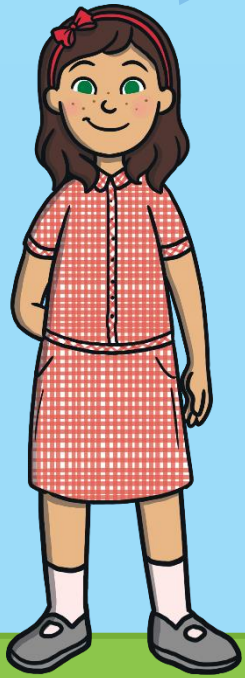

Can you point to the tallest sunflower?

Can you point to the
shortest sunflower?

Can you point to a sunflower that is taller than me? Does anyone have a different answer?

Thank you for helping
me to measure all of my
sunflowers.

Maybe you could try
growing and measuring
a sunflower too!
